

Mobile Guarding Patrols a Large Corporate Campus

Mobile Guarding | Large Corporate Campus

An iconic, global on-line travel company that owns and operates more than 100 branded points of sale in more than 60 countries was looking for new ideas for their security program at its expansive corporate office campus

Challenge:

The client was seeking for a way to patrol its 40-acre campus and minimize security costs during low activity hours. Beyond the scope of the campus itself, other coverage challenges included multi-level parking structures, a local walking trail and a pedestrian walkway with attached bridge. After performing an operational analysis, Securitas USA developed an Integrated Guarding model utilizing Mobile Guarding with On-site Guarding.

Solution:

- Utilize Mobile Guarding patrols to increase coverage during low activity periods, seven days a week.
- Replace static patrols of the property using a client vehicle with Securitas Mobile Guarding patrol officers and vehicle.
- Mobile Officers use smart phone technology to receive real time updates while in the field and interactive post orders with site-specific directives.

Result:

- The client is able to have customized patrol procedures based on the best patrol timeframe and frequency for its property.
- The client is provided with real-time web-based reporting of patrol inspections through a secure online client portal.
- Integrated Guarding allows the client to receive greater security coverage at the quality and cost they required.
