

Innovative Ideas Keep an Aerospace Manufacturer Flying High. And Safe.

Mobile Guarding | Aerospace

Securitas USA was asked by a leading aerospace manufacturer to provide additional approaches to the security program that covered its expansive, 20+ building manufacturing complex. As a long time provider of this client's security services, Securitas was well positioned to provide several innovative recommendations.

Challenge

The client was seeking alternatives to its security program that would provide more insightful, real-time information on its security services while not increasing overall costs. Securitas' Integrated Guarding options provided the opportunity to utilize mobile patrols which increased efficiencies and security awareness while reducing overall spend.

Solutions

- During the overnight shift, Securitas reduced the number of officers assigned to the gate by supplementing coverage with Mobile Guarding.
- The Mobile Guarding tour includes a welfare check of the shift's static officer.
- Securitas Mobile Guarding provides tour verification software so that the client knows exactly when Mobile officers are on site. Using over 40 on-site geotags, this service provides the client information on the status of patrolled areas and identification of potential security issues.

Results

- By utilizing tour verification software, the client receives real-time reporting of priority alerts as well as having real-time web-based access, through a secure portal, to all tour and incident reports including geotag and GPS history.
- The client reduced annual security costs by 12% while maintaining the same security standards.
- An unexpected benefit was the discovery by Securitas mobile patrol officers of various client bunkers, used for storage of highly sensitive substances, which were not properly secured. Securitas officers now routinely check these dozens of bunkers and are the first level of response for addressing any closure or security-related issues.
