

REIT Taps Integrated Guarding for Proactive Security

Real Estate Investment Trust | Integrated Guarding with Remote Perimeter Patrol

A Real Estate Investment Trust with a video surveillance system at its office in downtown Indianapolis, IN was seeking a cost-effective security solution that would provide additional coverage for an open, public plaza near its headquarters.

Challenge:

After a serious incident involving severe personal injury, acquiring a higher level of proactive security became an urgent matter.

Solution:

The Securitas Operation Center's Solutions Support Team in Charlotte, NC worked with the local Securitas branch manager to gather information about the existing system in order to leverage the client's previous technology investment. Software in the surveillance system now enables Securitas Remote Guarding officers to perform remote patrols to identify and respond to unauthorized activity. The full solution features:

- Three outdoor-rated high-definition cameras designed for high-activity areas.
- Remote patrols after-hours (when previous incidents occurred).
- Recorded video footage for retro-active investigation pertaining to safety and liability.
- On-site Guarding officers who immediately respond to incidents requiring physical presence.

Result:

Since the implementation of the solution, unauthorized activity has significantly decreased. The client's security coverage has been enhanced by leveraging current resources without increasing on-site personnel, and provides a cost-effective solution. The system increases safety for employees, visitors and the On-site Guarding officers.
