

Case Study

Manufacturing

Masterson

Innovative technology provides a simple approach to security.

Challenge

The Masterson Company is a dry food manufacturing and delivery site located in Milwaukee, WI. Securitas officers are responsible for access control and property protection. We have serviced the account since 2010. Predominantly, during 3rd shift change, there was a rash of car break-ins and thefts. The difficulty in catching these individuals was that the lot was very dark (inadequate overhead lighting), and during shift change, there are many off-duty employees going to their cars, making it very difficult to distinguish employee's from individuals there to break in to cars.

Solutions

We helped the client get the best pricing on lighting and updated camera equipment to help alleviate these issues. We have also added a badge access gate for entry and exit of the lots, allowing only those authorized to be there. Lastly, we amended the post orders to sanction our [on-site static guard](#) to post near the gated entrance and added [Securitas Mobile](#) patrols to deter unwanted activity.

Results

Since the addition the above features, we have seen no issues with theft in the parking lot, have better overall video documentation of the site, and, most importantly, the employees have a much stronger sense of safety coming and going from work.
