

# HVAC Manufacturer Cools Costs and Theft

## Cooling Equipment Manufacturer | Integrated Guarding

*A manufacturer of cooling equipment for industrial and HVAC markets worldwide recently acquired a site in California undergoing chemical cleanup.*

### Challenge:

Following a theft of hundreds of thousands of dollars in copper and power supplies, the client contacted Securitas to determine a cost-effective Protective Services plan.

### Solution:

After performing an in-depth Securitas Risk Assessment, the local Securitas Branch Manager identified an efficient Integrated Guarding solution based on the unique needs of this facility with minimal on-site activity. The local Securitas Solutions Engineer designed a strategic camera system which included:

- Eight high-definition exterior cameras with intelligent video analytics.
- Discrete, photoelectric beams covering the perimeter, shifting the detection zone to the property line.
- System alerts in the event of a perimeter breach or on-site activity such as unauthorized individuals or vehicles.
- High quality audio speakers allowing for real-time communication with on-site individuals.
- Remote Guarding officers who verify alerts, and escalate to local law enforcement as needed, thereby reducing false alarm costs.
- Mobile Guarding Patrols providing a visual deterrent who are dispatched in the event a presence at the site is required.

### Result:

Integrating intelligent technology with peripheral devices provides the client with an efficient and cost-effective program, significantly reducing false alarms and increasing the efficacy of the site. Proactive situational management during inactive hours lends itself to greater flexibility, which can accommodate unforeseen increases in activity without coordination of dedicated staff. The client has been able to mitigate overall risk while controlling security spend with the use of Securitas Integrated Guarding.
