

EZCORP, A LEADING PROVIDER OF PAWN LOANS, IS DEDICATED TO SATISFYING THE SHORT-TERM CASH NEEDS OF CONSUMERS AROUND THE WORLD. IT LOOKED TO SECURITAS ELECTRONIC SECURITY FOR ALARM VERIFICATION.

CHALLENGE

With over 500 locations in the United States, EZCORP has multiple sites that require security verifications prior to dispatching the police in case of emergency. Some of its locations would stop receiving police response if the sites had too many false alarms, and EZCORP was spending a significant amount of money on false alarm fines. Securitas Electronic Security (SES) was asked to provide an effective solution to its alarm verification process.

SOLUTION

After consultation with the SES team and a review of the customer's needs, SES identified Securitas Mobile Guarding Alarm Verification as the solution to EZCORP's security verification processes.

- The SES Permitting Department identified sites affected by verification laws.
- Mobile Guarding officers are dispatched to the sites when an alarm is tripped, resulting in police dispatch only when necessary.

RESULT

EZCORP has found this to be a valuable solution to its security verification needs with the following benefits:

- Police are dispatched only when necessary.
 - False alarm fines have been drastically reduced.
 - Employees are encouraged by this extra layer of protection.
-
